

Suffering from Candida overgrowth?

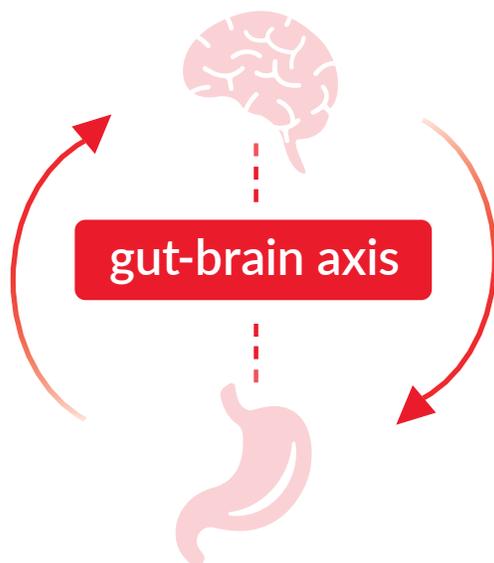

When Candida begins to grow uncontrollably, it can cause an infection known as candidiasis. In fact, Candida is the most common cause of fungal infections in humans.

Many types of fungi live in and on the human body, including the genus of yeasts known as Candida which is typically found in small amounts in the mouth and intestines and on the skin. At normal levels, the fungus is not problematic.

Factors that encourage Candida overgrowth could be over exposure to antibiotics, a diet high in sugar or refined carbs, high alcohol intake, a weakened immune system, oral contraceptives, diabetes, nutritional deficiencies, or overexposure to chlorinated water.

Opportunistic yeast and fungal overgrowth, if left unchecked, can lead to unwanted inflammatory symptoms like digestive and skin issues, fatigue, joint pain, and recurring infections and even severe gastrointestinal disturbances like Leaky Gut syndrome and H.pylori infection. Getting to the root requires a holistic system of its own, strong enough to bust yeast out of its way.

Innovite's gut classic formulas target unwanted Candida. Designed to synergistically support intestinal health and help relieve inflammatory conditions of the digestive tract.

- joint pain
- skin issues
- sluggish bowels
- chronic fatigue
- sensitivity to smell
- headaches
- oral thrush
- recurring infections

Research suggests that microorganisms in our gut such as yeast, control inflammation - and can contribute to factors that affect our brain health.

Gut Classics

30 day protocol

Innovite's classic formulations are critical components of a well-rounded anti-fungal program. Let your digestive system finally flourish.

30 DAY PROTOCOL

Morning

Evening

Day 1-30

Combine 500ml of filtered, warm water and fresh lemon juice with the following products, 20 min before your first meal:

- 1 scoop of Psyllium + Fibregum™
- Start with 1 teaspoon of Caproil (gradually increase to 2 tsp to reduce die-off reactions)
- Swallow 2 capsules of Licorice + activated charcoal

Take on an empty stomach:

- 1 capsule of DDS®-1 Probiotics

Maintenance: Reduce Caproil to twice per week for one week. Then discontinue completely.

Ongoing intestinal support: continue with Licorice + activated charcoal, Psyllium + Fibregum™ and DDS®-1 as needed.

Long term antifungal support: introduce Olive Leaf Extract

For compromised GI tracts or mucosal damage: consider Gut Repair

For anti-parasitic support: choose Black Walnut Complex

Repeat protocol as necessary.

CAPROI 525mg of Caprylic Acid per teaspoon.

Studies show caprylic acid is effective in ridding yeast by breaking down the yeast cell membrane. Broad range applications include: oil pulling, topical as a skin cleanser, soothing rashes or moisturizing. Can be mixed in smoothie or taken on its own to support metabolism.

LICORICE +225mg food grade activated charcoal.

Traditionally used to soothe gastrointestinal issues, digestive upset, and gastritis. Increased mucin production may help protect the digestive tract against pathogens like Candida and H. Pylori.

PSYLLIUM + FIBREGUM

Ensures that Caproil is carried through the digestive tract and pressed against the sides of the intestines to address candida overgrowth. Acts as a sponge to absorb and carry out bowels

DDS®-1 PROBIOTICS

Clinically studied superstrain at a low dose to help normalize stool and bowel habits and contribute to a healthy gut flora. Has over 35 years of clinical research- clinically proven to be well-tolerated with all age groups.
